

## 自體脂肪移植

自體脂肪移植是現時其中一種最普遍的整形外科手術。醫生會從身體有過多脂肪的部位，如下腹、大腿等抽取脂肪，經適當處理後再注入有需要的部位。自體脂肪移植不但可以改善身體線條，同時亦可用於豐胸、改善疤痕及令面部更年輕。

手術可以在局部或全身麻醉方式下進行。

## 自體脂肪位置適用於：

- 改善額頭、顴部(太陽穴)及鼻背線條
- 改善淚溝及下眼瞼凹陷
- 令雙唇及蘋果肌飽滿
- 改善法令紋、木偶紋及頸紋
- 提升胸部及臀部
- 令手背更年輕

## 以脂肪作填充物的優點

- 質感自然
- 容易抽取，非常安全
- 無過敏反應或排斥
- 外觀自然，效果持久
- 沒有明顯疤痕

## 精微自體脂肪移植 (MAFT)

革命性精微自體脂肪移植技術(MAFT)，利用精微自體脂肪移植器 MAFT-GUN 作連續、精準、定量脂肪團粒注射，團粒最小可達 1/240 毫升。

相比於人手注射，MAFT 可事先決定團粒體積再作注射，期間確保團粒大小一致。脂肪團粒的半徑只有 1 毫米，存活率較高，整形效果更持久，外觀更佳。

MAFT 全程非常安全，復原亦快，傷口及併發症較少。

## 注射其他填充物

- 有可能出現過敏反應
- 效果維持 6 個月至 1 年
- 或需重複注射

## 以 MAFT 注射脂肪組織

- 脂肪取自於人體本身，無過敏反應或排斥
- 脂肪組織存活率高，效果更持久
- 首次注射後效果明顯

### CONSULTATION HOURS

Monday to Friday  
10:00am – 6:00pm

Saturday  
9:00am – 1:00pm

Closed Sundays and Public Holidays  
Consultation by Appointment

### 診症時間

星期一至五  
上午 10 時至下午 6 時

星期六  
上午 9 時至下午 1 時

星期日及公眾假期休息  
敬請預約

# BODY RESHAPING AND MICRO-AUTOLOGOUS FAT TRANSPLANTATION

## 重塑身形與精微自體脂肪移植

### AUTOLOGOUS FAT TRANSPLANTATION (AFT)

Also known as fat grafting, autologous fat transplantation (AFT) is one of the most popular cosmetic procedures today. With AFT, excess fat tissue is harvested from such areas as belly and thighs, and then injected into targeted areas after special treatment. The benefits of AFT are multifarious: it can correct contour defects, augment breasts, improve scars and achieve facial rejuvenation.

The harvesting and injection procedures are performed under local or general anaesthesia.

### APPLICATIONS OF AUTOLOGOUS FAT TRANSPLANTATION

- Contouring of forehead, temples and nasal dorsum
- Treatment of sunken upper eyelids and tear trough
- Adding fullness to apple cheeks and lips
- Filling of nasolabial folds (smile lines), marionette lines and neck folds
- Augmentation of breasts and buttocks
- Rejuvenation of hands

### BENEFITS OF FAT TISSUE AS FILLERS

- A natural filling substance
- Easy and safe to extract
- No allergic reactions or rejection
- Can achieve a natural look with long-lasting results
- No obvious scar

### MICRO-AUTOLOGOUS FAT TRANSPLANTATION (MAFT)

MAFT is a groundbreaking AFT technique using a new device called MAFT-GUN. With MAFT-GUN, multiple fat parcels can be injected into target areas in amounts as small as 1/240ml continually with high precision, high consistency and good control.

Compared with manual injection, the size of fat parcels can be predetermined before and maintained throughout the procedure with MAFT-GUN. With a radius of only 1 mm, the fat parcels delivered during MAFT have a higher survival rate than those injected manually, thereby achieving better, longer-lasting cosmetic outcomes.

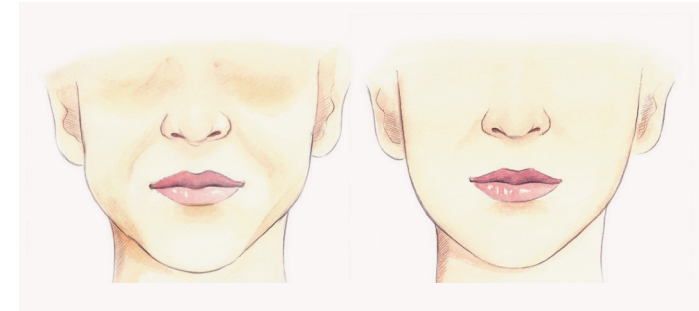

MAFT is safe and recovery is quick. Wounds and complications are also minimal.

#### Injection of Other Types of Fillers

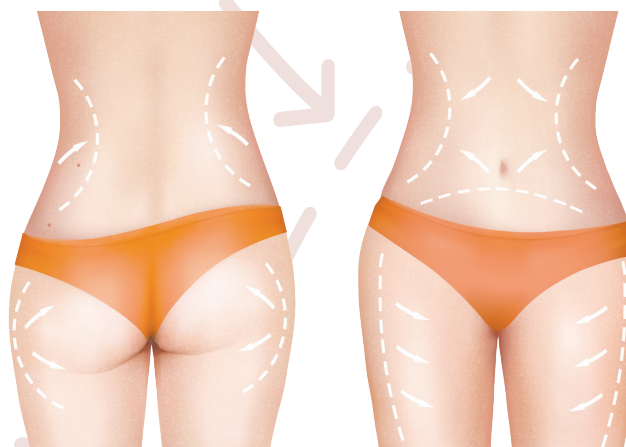

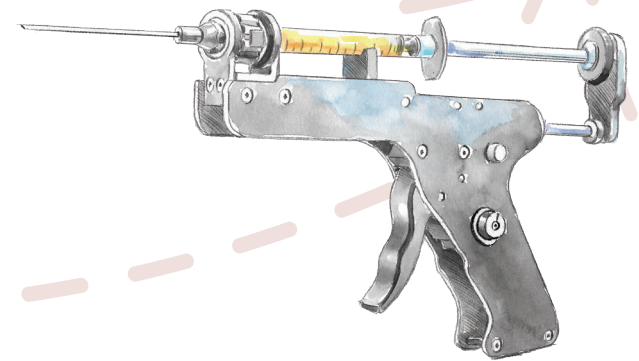

- Allergic reaction is possible
- Duration: 6 months – 1 year
- May require repeated injections

#### Fat Tissue Injection by MAFT

- No allergic reaction or rejection as the tissue is harvested from one's own body
- Long-lasting due to the high survival rate of fat tissue
- Prominent outcome
